

Scientists have found that 131 out of 152 species of fish face possible extinction, and of these 15 are critically endangered. Sharks are killed mainly for their fins in making fish-fin soup. Seahorses are killed to be used in medicines. Helping marine life survive has become an urgent matter.

Many steps can be taken to prevent marine life from disappearing. For example, strict laws should be enacted to protect those endangered marine animals. For those used for medical purposes, the best way to save them is to ban their use. For those killed for food, no-fishing zones are a necessary practice. It is hoped that the countries concerned can work together with their people to help conserve marine life.

Part III:

Essay question: 30%

As we all know, Taiwan's 12-year compulsory education plan will be implemented in 2014. In your opinion, without a unified exam or any entrance exam as a reference, how do you let students know what they should study and what abilities they should have. In other words, as an English teacher, you may have students with varied proficiency levels. In this situation, how are you going to teach effectively?
