

Issues in Science Education

The trend of science education is discussed by analyzing the articles of Journal of research in science teaching, international journal of science education and Chinese Journal of Science Education from 2003 to 2009. Six main domains of science education (teaching, learning, curriculum, assessment, teacher education and philosophy of science) are involved in this course. The literatures are read and discussed to show the past, present and future of each issue in science education.
